2nd & 3rd Quarters**

**Applications Due:
Sept. 12, 2014 & TBA for 3rd Qtr**

Wherever there is a need for personal care, CNAs are the ones who perform the most basic needs of patients, young and old alike. A CNA is responsible for direct care services such as bed making, grooming and vital signs. A CNA's job does not end with the physical needs of patients. CNAs give patients important social and emotional support. This job requires compassion and a desire to make people comfortable and happy.

Agenda - Content

The Certified Nursing Assistant Training:

- Provides the required 75-hour CNA training, including the testing
- Prepares the student for the transition into the role of a professional healthcare worker
- Introduces students to healthcare careers
- Provides the tools to gain immediate employment

Benefits

- Tuition
- Books
- Certification testing (once)

Applications are due Sept. 12th for the 2nd Quarter Enrollment.

This CNA training will allow you to enter the healthcare field in a short time.

You may start working as a CNA while you finish high school. Some technical or post-secondary healthcare education fields require CNA certification.

Many CNAs go on to other professional healthcare careers, such as radiology or laboratory technicians, healthcare administrators, licensed and registered nurses, medical assistants, physical therapists and doctors.

The Certified Nursing Assistant Training program meets the South Dakota Board of Nursing requirements for CNAs. CNAs work under the supervision of a registered nurse, LPN or other supervisory staff.
